CLINICAL FOCUS

Dr. Okan's clinical work is centered on digestive system disorders. This covers the assessment and management of symptoms and conditions arising in the digestive tract, with care planned around each patient's history, examination findings and previous investigations. Where appropriate, the evaluation draws on existing reports and imaging so that earlier findings can be taken into account before any further tests are proposed.

His second listed area of expertise is gastrointestinal endoscopy. Endoscopic examination allows the lining of the digestive tract to be viewed directly and, when indicated, tissue samples to be taken for further analysis. Whether an endoscopic procedure is suitable, and which type, depends on the individual patient's symptoms, medical history and prior test results, and is decided after clinical assessment. Dr.
