CLINICAL FOCUS

Dr. Özel's clinical work covers a range of common surgical conditions in children. In pediatric urology, he assesses and treats hypospadias and performs circumcision. He also sees girls with labial adhesions, a condition in which the labia minora become joined and which may require evaluation and, in some cases, treatment.

His practice includes childhood hernias, among them umbilical hernia in children, as well as the evaluation and surgical management of appendicitis in children. These conditions form part of the wider pediatric surgery services offered at the hospital.
