CLINICAL FOCUS

A central part of Dr. Demirkaya's work concerns lung cancer, in particular non-small cell lung cancer. His listed procedures in this area include mediastinoscopy, video-assisted mediastinoscopic lymphadenectomy and mediastinal lymphadenectomy, which are used to assess and remove lymph nodes in the mediastinum, the central compartment of...

Dr. Demirkaya also treats pectus excavatum, a congenital depression of the chest wall, including its minimally invasive repair. His areas of expertise further include vascular thoracic outlet syndrome and central venous port implantation, together with pinch-off syndrome, a complication that can follow port placement.
