CLINICAL FOCUS

A large part of Dr. Koç's practice concerns the nose. He performs septoplasty to correct a deviated nasal septum, which can contribute to nasal obstruction, and septorhinoplasty, in which septal correction is combined with reshaping of the external nose. He also carries out nasal aesthetic surgery;

In the throat, his areas of expertise include tonsil surgery, pharyngitis and adenoid conditions. In the ear, he assesses patients with hearing loss and with vertigo and balance disorders, an area that overlaps with his memberships in otology and neurotology societies.
