Ophthalmology

## CLINICAL FOCUS

The areas of expertise listed for Dr. Banaz are eyelid ptosis and drooping eyelid. Eyelid ptosis refers to a lowering of the upper eyelid, which may affect one eye or both and may vary in degree. Depending on its extent, a drooping eyelid can be a cosmetic concern, may interfere with the upper field of vision, or may be noticed by the patient or family members as a change in the appearance of the eye.

In a consultation for eyelid ptosis, Dr. Banaz reviews the patient's history, including when the drooping was first noticed and whether it has changed over time, and examines the eyelids and eyes. Previous eye examinations, photographs showing the eyelid position over time, and any earlier treatment records can be useful for this review.

## INTERNATIONAL PATIENTS

Dr. Banaz consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before the visit, the hospital's international patient team coordinates the collection of prior reports and imaging, for example earlier ophthalmology reports, MRI or CT reports where relevant, laboratory results, operative notes and discharge summaries, and arranges...
