Hospital, İstanbul

DEPARTMENT
Dental & Oral Health

CLINICAL FOCUS

The core of Dr. Güler's work is the initial dental evaluation. This usually begins with a review of the patient's dental and general medical history, followed by a clinical examination of the teeth, gums and soft tissues of the mouth. Where existing X-rays or other dental imaging are available, these are reviewed as part of the same assessment.

Dental diagnosis and treatment planning follow from this evaluation. Dr. Güler discusses the findings with the patient, explains what has been identified and outlines the possible approaches, including the order in which any treatment might be carried out and what each step would involve.

INTERNATIONAL PATIENTS

Dr. Güler consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as dental X-rays, CT reports, laboratory results and notes from previous treatments, and arranges appointments and the hospital visit itself.
