CLINICAL FOCUS

In pediatric hematology, Dr. Antmen assesses and manages children with iron deficiency and anemia and with thalassemia. His interests extend to malignant blood disorders in childhood, including leukemia, myelodysplastic syndrome and lymphoma, as well as bone marrow transplantation and cellular therapies.

In pediatric oncology, his areas of expertise include pediatric brain tumors, Wilms tumor, adenocarcinoma and rare tumors. The appropriate approach for each child depends on the diagnosis, the stage of the disease and the individual clinical picture, and is discussed with the family after a review of the available findings.
