CLINICAL FOCUS

A large part of Dr. Maviş's practice is endodontics, the branch of dentistry concerned with the dental pulp and the tissues surrounding the root of the tooth. He assesses and treats tooth root infections, which may develop when bacteria reach the pulp through deep decay, a crack or a previous restoration.

On the restorative side, Dr. Maviş treats enamel loss and places dental fillings to repair teeth affected by decay, wear or minor damage. For larger defects, he uses porcelain inlays and onlays, which are laboratory-made restorations bonded to the prepared tooth.

INTERNATIONAL PATIENTS

Dr. Maviş consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior dental reports and imaging, such as X-ray or CT reports, notes on previous fillings, root canal treatments or other dental work, and any laboratory results, and it arranges...
