CLINICAL FOCUS

Dr. Göktaş assesses and manages a range of conditions affecting the anterior and posterior segments of the eye. His areas of expertise include glaucoma, cataract, smart lens procedures, and keratoconus. He also sees patients with strabismus and uveitis.

A significant part of his work concerns retinal diseases, including retinal tears and detachment and macular degeneration. Surgical care in this area includes vitrectomy. The suitability of any procedure is decided individually after examination, and not every patient with a given diagnosis will be a candidate for the same approach.
