Acibadem Kartal Hospital, İstanbul

DEPARTMENT
Dental & Oral Health

CLINICAL FOCUS

Dr. Kılavuz evaluates and treats a range of periodontal conditions. These include gum bleeding, gum recession, gum abscess, oral sores and bad breath, as well as the routine removal of plaque and tartar through dental scaling. For patients with gum disease, she may use laser gum treatment as part of a treatment plan.

A further area of her work is implant dentistry. She places dental implants and treats peri-implantitis, an inflammatory condition affecting the tissues around an existing implant. Her practice also covers gum aesthetics, including the assessment of a gummy smile, where more gum tissue than desired shows when smiling; in selected cases, treatment with Botox may be considered.

INTERNATIONAL PATIENTS

Dr. Kılavuz speaks Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior dental reports and imaging, such as X-ray or CT reports, and arranges appointments and the hospital visit.

CONDITIONS TREATED

Gum bleeding Gum abscess Bad breath Oral sores
Gum recession Tooth abscess
