CLINICAL FOCUS

Dr. Aksoy evaluates and manages a range of cardiovascular conditions. These include ischemic heart disease, heart valve disease and aortic stenosis, atrial septal defect, and rhythm disorders such as atrial fibrillation. He also follows patients with hypertension, hypotension and hyperlipidemia, conditions that are often assessed and managed over time rather than in a single visit.

Diagnostic work forms an important part of his practice. He uses echocardiography to assess the structure and function of the heart and its valves, Holter rhythm monitoring to record heart rhythm over an extended period, and angiography to examine the coronary arteries.

Angiography

Aortic Stenosis

Atrial Septal Defect

Atrial Fibrillation

Hypotension

INTERNATIONAL PATIENTS

Dr. Aksoy speaks Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as echocardiography, CT or angiography reports, laboratory results, operative notes and discharge summaries, and arranges appointments and the hospital visit.
