CLINICAL FOCUS

Dr. Oktay's clinical practice covers a range of structural and functional heart conditions in children. This includes congenital heart disease such as atrial septal defect, as well as heart valve disorders, cardiomyopathy and heart failure. She also evaluates and manages arrhythmias in pediatric patients.

A particular area of interest is fetal echocardiography and the prenatal diagnosis of heart conditions. This allows certain heart problems to be identified before birth, so that families and the care team can plan follow-up and care for the newborn in advance.
