Acibadem Atasehir Hospital, İstanbul

DEPARTMENT
Internal Medicine

CLINICAL FOCUS

Dr. Göbel evaluates and manages a broad range of internal medicine conditions, with a particular interest in thyroid diseases and their treatment. Her practice also includes the diagnosis and treatment of metabolic disorders and the assessment and management of obesity.

She also treats patients with anemia, type 1 diabetes and type 2 diabetes, as well as upper respiratory tract diseases. Because several of these conditions are long-term, her work includes ongoing follow-up alongside the initial diagnostic evaluation, with treatment plans adjusted according to the patient's clinical course and response.
