SPECIALTY

Oral & Dental Health

FOCUS

Trismus · Orthognathic surgery

HOSPITAL

Acibadem Altunizade Hospital, İstanbul

DEPARTMENT

Dental & Oral Health

CLINICAL FOCUS

A large part of Dr. Bayram's work concerns the surgical management of the jaws. She performs orthognathic surgery to correct the position of the jaws, surgery for jaw fractures and removal of jaw cysts. She also carries out bone grafting, which may be considered when the jawbone does not offer enough volume to support planned treatment.

Dr. Bayram also evaluates and treats temporomandibular joint disorders and trismus, a condition in which the mouth cannot be opened normally. For patients who grind or clench their teeth, she offers Botox treatment for teeth grinding and night guard therapy, which are intended to reduce muscle activity and protect the teeth and joints.

Trismus

Orthognathic surgery

Jaw fracture surgery

Temporomandibular joint disorders

Jaw cyst surgery

INTERNATIONAL PATIENTS

Dr. Bayram consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the hospital's international patient team coordinates the collection of prior reports and imaging, such as X-ray or CT reports, laboratory and pathology results, operative notes and discharge summaries, and arranges the appointment and the hospital visit.

CONDITIONS TREATED

Trismus

Temporomandibular joint disorders

Jaw cyst surgery

Night guard therapy
