DEPARTMENT
Pediatrics

CLINICAL FOCUS

Dr. Koraman's clinical work covers child and adolescent health across age groups. In the newborn period, this includes newborn follow-up, newborn screening tests, and the evaluation of newborn jaundice.

Her approach is based on a history taken from the family, a clinical examination of the child, and a review of any previous test results, with further investigations arranged where they are considered clinically appropriate. Recommendations are discussed with parents or caregivers in the context of the child's age and overall health.

Pediatric constipation

Iron deficiency and anemia in children

Child and adolescent health

Upper respiratory tract illnesses in children

Croup
