Hospital, İstanbul

DEPARTMENT
Pediatrics

CLINICAL FOCUS

A large part of Dr. Polat's practice involves anemia in children, including iron deficiency and the evaluation of related laboratory findings. He also follows children with thalassemia, a hereditary blood disorder that requires long-term monitoring and coordinated care.

In pediatric oncology, his areas of expertise include leukemia, lymphoma, Wilms tumor and childhood brain tumors. Evaluation of these conditions typically depends on a careful review of blood tests, imaging and any prior pathology findings, and the appropriate approach is determined individually for each child.
