CLINICAL FOCUS

As a radiologist, Dr. Bayramoğlu is involved in the imaging side of patient care: acquiring and reading studies, describing findings in a written report, and communicating with the referring physician so that imaging results can be placed in the context of the patient's history and examination. Radiology reports form part of the basis on which treating doctors in other fields plan further investigation or treatment.

Imaging services described on this site that fall within the field of radiology include coronary CT angiography, a computed tomography study of the arteries of the heart, and PET-CT imaging, which combines metabolic and anatomical information in a single examination.

INTERNATIONAL PATIENTS

Dr. Bayramoğlu speaks Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the international patient team coordinates the collection of prior reports and imaging — for example MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries — and arranges appointments and the hospital...
