Dental & Oral Health

CLINICAL FOCUS

The core of Dr. Gökçimen's practice is prosthetic dental treatment, which addresses the replacement or rebuilding of teeth and the restoration of oral function and appearance. Within this area she works on restorative dentistry, meaning the repair of teeth that have been damaged or weakened, and on tooth replacement for patients who have...

Because prosthetic needs vary considerably from one person to another, the suitable approach depends on the condition of the remaining teeth, the surrounding tissues and the patient's general dental history. Dr. Gökçimen discusses these factors with each patient so that the proposed treatment reflects the individual clinical situation.
