CLINICAL FOCUS

A significant part of Dr. Baş's work involves the restoration of teeth affected by decay or damage. Dental fillings are used to restore the shape and function of a tooth after the affected tissue has been removed.

Where a tooth cannot be preserved, Dr. Baş performs tooth extraction. Before an extraction is considered, the tooth and the surrounding tissue are examined, and any relevant imaging is reviewed so that the patient understands why the procedure is being proposed and what to expect afterward. She also carries out bad breath assessment.

Bad breath assessment

INTERNATIONAL PATIENTS

Dr. Baş speaks Turkish and English, and interpreters can be arranged for patients who need them. The Acibadem international patient team coordinates the collection of prior reports and imaging, such as dental X-rays, previous treatment records and any relevant laboratory results, arranges appointments and organises the hospital visit.
