CLINICAL FOCUS

Hearing assessment forms a central part of her practice. Patients may be referred because they or their families have noticed difficulty hearing, because a hearing problem is suspected in connection with an ear condition, or because a physician wishes to document hearing function before or after treatment.

Balance assessment is the second area of her work. Dizziness, unsteadiness and vertigo can have many possible causes, some of which are related to the inner ear. Assessment of balance function is intended to help the ENT team understand whether the vestibular system may be contributing to a patient's symptoms.

INTERNATIONAL PATIENTS

Buket Ari consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as MRI or CT reports, previous hearing or balance test results, laboratory findings, operative notes and discharge summaries, and arranges the appointment...
