HOSPITAL

Acibadem Bakirkoy
Hospital, İstanbul

DEPARTMENT

Treatment of Respiratory

CLINICAL FOCUS

The core of her practice is respiratory condition treatment. This begins with a careful assessment of the patient's symptoms, including how long they have been present, how they have changed over time and what has already been tried. Existing reports and imaging are reviewed alongside a clinical examination, so that the current state of the respiratory system can be understood before any treatment is proposed.

Treatment is then tailored to the condition that has been identified and to the patient's overall health. Because respiratory conditions can be short-lived or long-standing, the approach may include treatment of the immediate problem, ongoing management and follow-up, or a combination of these.

Respiratory condition treatment

INTERNATIONAL PATIENTS

Busenur Ceylan consults in Turkish and English, and interpreters can be arranged for patients who prefer another language. Before the visit, the hospital's international patient team coordinates the collection of prior reports and imaging, such as MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries, and arranges appointments...
