CLINICAL FOCUS

Pathological evaluation is the microscopic and laboratory examination of tissue samples obtained from patients. In this area, Dr. Ersöz assesses specimens and prepares reports that describe the findings and, where possible, establish or clarify a diagnosis.

Cytopathology, her second area of expertise, concerns the examination of individual cells and small cell groups rather than intact tissue. Dr. Ersöz evaluates such samples and interprets the cellular changes that may point toward inflammatory, benign, or malignant processes.

Cytopathology

INTERNATIONAL PATIENTS

Dr. Ersöz works in Turkish and English, and interpreters can be arranged for patients who speak other languages. Because pathology depends heavily on existing material, the Acibadem international patient team coordinates the collection of prior reports and imaging, including laboratory and pathology results, MRI, CT, X-ray or ultrasound...
