CLINICAL FOCUS

A substantial part of Dr. Güleç's practice is preventive. This includes fluoride application to support the enamel of developing teeth, fissure sealants to protect the chewing surfaces of molars, and space maintainers used when a primary tooth is lost early and the space needs to be preserved for the permanent tooth that follows.

Dr. Güleç also treats tooth root infection and performs root canal treatment in primary teeth and in permanent teeth. Where a tooth cannot be preserved, she carries out tooth extraction. She manages dental trauma treatment following injuries to the teeth and surrounding tissues, which are common in childhood.

Primary tooth root canal treatment

Permanent tooth root canal treatment

Dental treatment under general anesthesia

Fluoride application

INTERNATIONAL PATIENTS

Dr. Güleç consults in Turkish and English, and interpreters can be arranged for families who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, for example dental X-rays, previous treatment notes and any relevant medical records, and arranges appointments and the hospital visit.
