CLINICAL FOCUS

A substantial part of Dr. Seyyar's work concerns the newborn period. This includes newborn follow-up after discharge, newborn screening tests, and the evaluation of newborn jaundice. She also sees infants with lactose intolerance and infant colic, where the assessment typically centers on feeding history, growth, and the pattern of symptoms described by parents.

Her other areas of expertise include childhood infectious diseases, upper respiratory tract infections in children, and croup. She also evaluates pediatric nutrition disorders and iron deficiency and anemia in children, where laboratory results are interpreted alongside dietary history and clinical findings.

Newborn follow-up Well-child care Childhood infectious diseases
Pediatric nutrition disorders Newborn screening tests

INTERNATIONAL PATIENTS

Dr. Seyyar consults in Turkish and English, and interpreters can be arranged for families who speak other languages. Before the visit, the hospital's international patient team coordinates the collection of prior reports, such as laboratory results, growth records, ultrasound or other imaging reports, and discharge summaries from previous care, and arranges appointments and the hospital...
