Hospital, İstanbul

DEPARTMENT
Radiology

CLINICAL FOCUS

A large part of Dr. Başekim's work involves ultrasound. This includes abdominal ultrasound, thoracic ultrasound and other forms of ultrasonographic imaging, as well as Doppler ultrasound, which is used to assess blood flow in vessels and organs.

He also works with computed tomography and virtual angiography, in which cross-sectional imaging data are used to visualize blood vessels. In addition, his practice includes interventional radiology, a field in which imaging guidance is used to perform diagnostic and therapeutic procedures.
