CLINICAL FOCUS

A central part of Dt. Berber's work is the assessment and treatment of gingivitis and periodontitis. Periodontal examination and charting are used to record the condition of the gums and the depth of the pockets around each tooth, which helps establish a baseline and monitor changes over time.

Beyond periodontal care, Dt. Berber's areas of expertise include tooth decay and cavities, bad breath evaluation and routine dental check-ups. Oral hygiene instruction forms part of many appointments, since daily home care is an important element in managing gum health and limiting the progression of disease.

Gingivitis and periodontitis

Dental plaque and tartar removal

Scaling and root planing

Gum recession treatment

Periodontal examination and charting

INTERNATIONAL PATIENTS

International patients who wish to consult Dt. Berber are supported by the Acibadem international patient team, which coordinates the collection of prior reports and imaging, such as dental X-rays, records of previous treatments and any relevant laboratory or pathology results, arranges appointments and organises the hospital visit.
