DEPARTMENT
Radiology

CLINICAL FOCUS

Dr. Aliş works with cross-sectional imaging methods that are used to evaluate a wide range of conditions. Magnetic resonance imaging (MRI) uses a magnetic field and radio waves rather than ionizing radiation to produce detailed images of soft tissues, organs and joints.

A further area of interest is CT colonography, also known as virtual colonoscopy, in which CT images of the large bowel are reconstructed to allow the colon to be examined without inserting an endoscope. Dr.
