CLINICAL FOCUS

Dr. Gökalp assesses and treats patients with type 1 diabetes and type 2 diabetes. Diabetes care in his practice involves reviewing the patient's history and existing laboratory results, discussing treatment options and planning follow-up; the specific approach depends on the individual clinical picture.

He also treats thyroid disease, including conditions such as hypothyroidism, and evaluates patients with pituitary disorders, an area reflected in his research on Sheehan's syndrome. A further area of his work is obesity management, which is addressed within his internal medicine and endocrinology practice.
