CLINICAL FOCUS

The core of Dr. Kahya's practice is restorative dental treatment. In general terms, this area of dentistry is concerned with repairing teeth that have been affected by decay, wear or damage, and with restoring their form and function. The approach chosen for an individual patient depends on the condition of the teeth, the extent of any damage and the findings of a clinical examination, so no treatment can be recommended...

Patients who wish to read background information about restorative approaches may find the pages on composite bonding, E-Max crowns, laminate veneers and full mouth reconstruction on this site helpful as general orientation. Whether any particular option is suitable for a given patient can only be determined after an examination and a discussion of the individual situation with the treating dentist.

Restorative dental treatment

INTERNATIONAL PATIENTS

Dr. Kahya consults in Turkish and English, and interpreters can be arranged for patients who prefer another language. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as dental X-rays, CT reports, previous treatment records and discharge summaries, and arranges appointments and the hospital visit.

EDUCATION & TRAINING
