CLINICAL FOCUS

Dr. Sari's clinical work centres on prosthetic dental treatment. This area of dentistry is concerned with the restoration or replacement of teeth that are missing, damaged or worn, with the aim of supporting function, comfort and the overall condition of the mouth.

She also provides dental prosthetic rehabilitation and restorative dental care. Restorative care addresses teeth affected by decay, wear or damage, while prosthetic rehabilitation focuses on rebuilding oral function when several teeth are involved. In each case, Dr. Sari reviews the patient's history, examines the mouth and considers any existing dental records before outlining the options.

Prosthetic dental treatment

Dental prosthetic rehabilitation

Restorative dental care

INTERNATIONAL PATIENTS

Dr. Sari consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the international patient team coordinates the collection of prior reports and imaging, such as X-ray or CT reports, previous dental records and treatment notes, and arranges appointments and the hospital visit.
