CLINICAL FOCUS

A large part of Dr. Yıldiran's practice involves the assessment and long-term management of chronic and acute lung disease. This includes asthma, chronic obstructive pulmonary disease and pneumonia, where the emphasis is on confirming the diagnosis, identifying contributing factors and agreeing on a treatment plan that can be followed...

Dr. Yıldiran also evaluates lung nodules and patients with suspected or confirmed lung cancer and other thoracic cancers. Bronchoscopy is among the diagnostic procedures she performs when tissue sampling or direct airway examination is needed to clarify a finding on imaging.
