DEPARTMENT

Dental & Oral Health

CLINICAL FOCUS

Dr. Eroğlu treats a range of conditions affecting the gums and the soft tissues of the mouth. These include gum disease, gum bleeding, gum abscess and gum recession, as well as peri-implantitis, an inflammatory condition affecting the tissues around dental implants. Professional tartar removal forms part of routine periodontal care and may be recommended as an early step in managing inflammation of the gums.

In addition to treating disease, Dr. Eroğlu addresses aesthetic concerns related to the gums. For patients with a gummy smile, in which a larger than usual amount of gum tissue is visible when smiling, she offers botulinum toxin applications where this is considered suitable after examination.

INTERNATIONAL PATIENTS

Dr. Eroğlu consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as dental X-ray or CT images, laboratory results and notes from previous dental or periodontal treatment, and arranges appointments and the hospital...
