CLINICAL FOCUS

Her clinical work is focused on the diagnostic side of hearing care. Audiometry is used to measure how well a person hears sounds of different pitches and volumes and forms the basis of most hearing assessments. Eda Yüksel carries out these assessments for adults who notice a change in their hearing, difficulty following conversation or other hearing-related concerns, and she evaluates the type and degree of hearing loss so...

A second area of her practice is paediatric hearing loss. Assessing hearing in infants and young children requires methods that do not rely on the child responding to instructions, and BERA (ABR) testing is one such method. It records the response of the hearing nerve and brainstem to sound and is used in children as well as in adults when standard audiometry is not sufficient or cannot be performed.

INTERNATIONAL PATIENTS

Eda Yüksel speaks Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as earlier hearing tests, MRI or CT reports, laboratory results, operative notes and discharge summaries, and arranges appointments and the hospital visit.
