DEPARTMENT
Cardiology Department

CLINICAL FOCUS

A large part of Dr. Duygu's practice concerns coronary artery disease, including the use of angiography in its evaluation. He also assesses and manages hypertension and low blood pressure, and follows patients with hyperlipidemia, a condition that is closely linked to cardiovascular risk.

Dr. Duygu also evaluates heart valve diseases, including mitral valve regurgitation and rheumatic heart disease. Echocardiography is a central diagnostic tool in this setting, allowing the structure and function of the heart and its valves to be examined non-invasively.
