Acibadem Kartal Hospital, İstanbul

DEPARTMENT
Dental & Oral Health

CLINICAL FOCUS

Dr. Saydam's practice focuses on the dental needs of children, from preventive measures to the treatment of established disease and injury. Preventive care includes fluoride application and fissure sealants, which are used to help protect teeth against decay.

Her areas of expertise further include the placement of space maintainers after the early loss of a primary tooth, the treatment of dental trauma in children, and aesthetic pediatric dentistry. For children who are unable to tolerate treatment in the dental chair, Dr. Saydam provides dental treatment under general anesthesia when this is indicated.

Space maintainers

Root canal treatment for primary teeth

Root canal treatment for permanent teeth

Dental treatment under general anesthesia

Fluoride application

INTERNATIONAL PATIENTS

Dr. Saydam consults in Turkish and English, and interpreters can be arranged for families who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as dental X-rays, previous treatment records and any relevant medical reports, and arranges appointments and the hospital visit.
