Acibadem International
Hospital, İstanbul

DEPARTMENT

Dental & Oral Health

CLINICAL FOCUS

The core of Dr. Güzelel's work is orthodontics, the branch of dentistry concerned with the position of the teeth and the way the upper and lower teeth meet. Orthodontic treatment is planned on an individual basis after a clinical examination and a review of dental records and imaging, and the appliance chosen depends on the findings, the goals of treatment and the preferences of the patient.

Within orthodontics, Dr. Güzelel has a particular interest in lingual orthodontics and aligner orthodontics. Lingual orthodontics uses fixed appliances attached to the inner, tongue-facing surfaces of the teeth, so that the brackets are not visible from the front. Aligner orthodontics uses a sequence of removable, transparent aligners to move the teeth in planned stages.

INTERNATIONAL PATIENTS

Dr. Güzelel consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the hospital's international patient team coordinates the collection of prior reports and imaging, such as X-ray reports, previous dental records and treatment summaries, arranges appointments and organizes the hospital visit.
