Hospital, İstanbul

DEPARTMENT
Radiology

CLINICAL FOCUS

Dr. Dinçer's clinical activity is focused on magnetic resonance imaging. This includes conventional MRI examinations as well as open magnetic resonance imaging, a form of MRI performed in a scanner with an open design rather than a closed tube.

A central part of her role is diagnostic imaging interpretation. In this capacity she reviews imaging studies, prepares written reports and communicates findings to the treating physicians who use them for diagnosis and for planning further care. Imaging findings are considered alongside the patient's history, symptoms and previous examinations;

INTERNATIONAL PATIENTS

Dr. Dinçer speaks Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries, and arranges appointments and the hospital...
