DEPARTMENT
Radiology

CLINICAL FOCUS

Dr. Süleyman's clinical work centers on cross-sectional and ultrasound-based diagnostic imaging. Magnetic resonance imaging is used to visualize soft tissues and organs and may be requested to clarify findings from other examinations.

Multidetector CT colonography, also called virtual colonoscopy, uses CT data to create images of the large bowel. It may be considered as an imaging-based option in selected patients, for example when a complete endoscopic examination is not possible or not preferred.
