DEPARTMENT
Neurosurgery

CLINICAL FOCUS

Dr. Sönmez evaluates and treats a range of spinal conditions. These include degenerative problems such as disc herniation and chronic low back, neck and back pain, as well as disorders of spinal alignment, including spinal hypolordosis, kyphosis and scoliosis.

A further part of his work is spinal fracture treatment. Depending on the type of fracture and the patient's overall condition, this may involve minimally invasive procedures such as kyphoplasty and vertebroplasty, in which the fractured vertebra is stabilized.
