CLINICAL FOCUS

A large part of Dr. Mehmetoğlu's practice involves the assessment and follow-up of blood pressure problems. He sees patients with hypertension as well as those with low blood pressure, and he uses ambulatory blood pressure monitoring to record readings over the course of a normal day rather than at a single clinic visit.

He also provides heart rhythm and cardiac imaging services. Holter rhythm monitoring records the heart's electrical activity over an extended period and is used to evaluate palpitations and suspected rhythm disturbances.
