CLINICAL FOCUS

Dr. Darıcı's clinical work centers on endometriosis and ovarian endometrioma, with a particular emphasis on ultrasonographic imaging. Her listed areas of expertise include endometriosis ultrasonography, ovarian endometrioma ultrasonography and gynecologic ultrasonography, which are used to assess the pelvic organs and to support diagnosis and treatment planning.

Her second area of focus is female infertility, including in vitro fertilization and assisted reproductive treatment. Building on her fellowship training in IVF and assisted reproductive treatment methods, Dr. Darıcı evaluates women with fertility concerns, including those in whom endometriosis may be a contributing factor, and discusses the options that may be appropriate for the individual patient.

INTERNATIONAL PATIENTS

Dr. Darıcı consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, arranges appointments and organises the hospital visit.
