CLINICAL FOCUS

Dr. Gürler's areas of expertise include lung cancer and other thoracic cancers, chest wall tumors and diaphragmatic disorders. He also treats the chest wall deformities pectus excavatum and pectus carinatum, as well as pneumothorax.

Diagnostic procedures form part of his practice. Bronchoscopy allows direct examination of the airways and sampling of tissue, while mediastinoscopy is used to assess lymph nodes in the mediastinum, which can be relevant to the staging of lung cancer.
