Hospital, İstanbul

DEPARTMENT
Dental & Oral Health

CLINICAL FOCUS

Dr. Kuybulu's clinical work centers on prosthetic dental treatment, the field in which she completed her postgraduate education. Prosthetic dental treatment concerns the restoration and replacement of damaged or missing teeth, with the aim of supporting chewing function and the overall stability of the bite.

Her second area of expertise is aesthetic dentistry, which addresses the appearance of the teeth alongside their function. Dr. Kuybulu approaches aesthetic and prosthetic questions together, so that the appearance of a restoration is considered as part of a functional treatment plan rather than separately from it.

Aesthetic dentistry

INTERNATIONAL PATIENTS

Dr. Kuybulu consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the hospital's international patient team coordinates the collection of prior reports and imaging, such as dental X-ray or CT reports, previous treatment records and laboratory results, and arranges appointments and the hospital visit.
