CLINICAL FOCUS

Dr. Saçan's clinical work centers on interventional radiology, a field in which imaging guidance is used to perform minimally invasive procedures. Her listed areas of expertise include transarterial radioembolization (TARE), an image-guided procedure in which radioactive material is delivered through the arterial system to a target area.

Her published work reflects a broad range of image-guided and interventional topics. Co-authored publications have addressed percutaneous cholecystostomy compared with emergency cholecystectomy in high-risk surgical patients, percutaneous treatment of simple hepatic cysts, early radiologic diagnosis and treatment methods in biliary tract...
