Hospital, İstanbul

DEPARTMENT  
Radiation Oncology

## CLINICAL FOCUS

Dr. Ağaoğlu evaluates and plans radiotherapy for a range of cancers. Her areas of expertise include head and neck cancers, brain tumors, breast cancer and gastrointestinal oncology. In these settings, radiotherapy may be considered on its own or alongside surgery and systemic treatment, depending on the diagnosis, the stage of disease...

She also performs brachytherapy, a form of radiotherapy in which a radiation source is placed inside or close to the area being treated. Whether external radiotherapy, brachytherapy or a combination is suitable is determined case by case, taking into account the tumor site, previous treatments and imaging findings.

Head and neck cancers Brain tumors Brachytherapy  
Gastrointestinal oncology Cancer oncology
