CLINICAL FOCUS

A central part of Dr. Ergene's work is robotic thoracic surgery, alongside other minimally invasive techniques such as single-port VATS (video-assisted thorascopic surgery). These approaches are considered for suitable patients with lung cancer and other thoracic cancers, as well as for benign conditions of the chest.

Dr. Ergene also treats pneumothorax, chest wall deformities including pectus excavatum and pectus carinatum, chest wall tumors, diaphragm disorders and thoracic outlet syndrome. His diagnostic and staging work includes bronchoscopy and mediastinoscopy, which may be used to evaluate airway findings and mediastinal lymph nodes before a...
