CLINICAL FOCUS

The core of Dr. Kaya's practice is prosthetic dental treatment, the field of dentistry concerned with restoring or replacing missing or damaged teeth. This includes prosthetic rehabilitation, in which the function and appearance of the dentition are rebuilt in a planned, stepwise way after tooth loss, wear or damage.

Dr. Kaya's second area of focus is implant dentistry, where dental implants are used as anchors for prosthetic restorations. Her prosthodontic background is relevant here, since the design of the final restoration influences how implant treatment is planned. Her membership in the ITI International Team For Implantology reflects this interest.

Implant dentistry

INTERNATIONAL PATIENTS

Dr. Kaya consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as dental X-rays, CT scans, laboratory results and records of previous dental treatment, and arranges appointments and the hospital visit.
