CLINICAL FOCUS

Dr. İçten's practice is dedicated to diagnostic breast imaging. She evaluates patients with breast diseases using mammography and ultrasound imaging, interpreting findings in the context of the patient's history, symptoms and any earlier examinations.

Radiological findings are one component of the diagnostic process. Where a breast lesion or other change is identified, the interpretation and any further steps are discussed with the patient and, where appropriate, with the treating clinicians, so that imaging results can be considered alongside clinical and pathological information.
