Hospital, İstanbul

DEPARTMENT
Gynecology & Obstetrics

CLINICAL FOCUS

A significant part of Dr. Nacak's practice is urogynecology. She sees women with urinary incontinence and other bladder health concerns, assessing symptoms and discussing the options that may be appropriate for the individual patient.

Her work further includes endometriosis treatment and fertility-related questions. Women with low ovarian reserve (AMH) can consult her for evaluation, and she provides care related to egg freezing for those considering fertility preservation.
