CLINICAL FOCUS

A large part of Dr. Güven's work concerns the newborn period. She carries out newborn follow-up and reviews newborn screening tests, and she assesses and monitors newborn jaundice. Parents of young infants also consult her for infant colic and gas pain, which she evaluates in the context of feeding, growth and general well-being.

Dr. Güven also evaluates a range of common pediatric conditions. These include growth disorders in children, iron deficiency and anemia in children, and constipation in children, each of which may call for a careful history, examination and, where appropriate, laboratory testing before a management plan is discussed with the family.

Infant colic and gas pain

Newborn screening tests

Newborn jaundice

Iron deficiency and anemia in children

Constipation in children

INTERNATIONAL PATIENTS

Dr. Güven consults in Turkish and English, and interpreters can be arranged for families who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as laboratory results, growth records, vaccination records, ultrasound reports and discharge summaries, and arranges appointments and the visit to the...
